EDUCATION

Indian Institute of Information Technology, Design and Manufacturing, Jabalpur

2024 – 2028

B.Tech in Computer Science and Engineering — CGPA: 8.2

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks, Cloud Computing, Machine Learning, AI.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, Rust, Java, HTML, CSS

Frameworks & Tools: React.js, Next.js, Node.js, Express.js, Flask, Django — Git, GitHub, Postman, VS Code, Supabase, JWT, LLM

Databases: MongoDB, PostgreSQL, MySQL, VectorDB, REST APIs

Areas of Interest: Full-Stack Web Development, AI & Machine Learning, Competitive Programming, Bitcoin/Blockchain Development

EXPERIENCE & OPEN SOURCE CONTRIBUTIONS

Summer of Bitcoin Intern — Braidpool (Genesis_KB)

May 2026 – Aug 2026 — [Link](#)

- Engineered a sophisticated AI framework for the automated transcription, translation, and semantic structuring of Bitcoin-related technical data.
- Refined STT performance using CoS2W techniques and LLMs to remediate ASR inaccuracies, ensuring high-fidelity textual output.
- Constructed an end-to-end audiobook generation system, leveraging voice synthesis and LLM orchestration for bespoke user consumption.
- Built an AI-driven repository for efficient note management, allowing for deep searchability and automated summarization of spoken content.
- Developed robust database schemas and managed complex migrations to facilitate seamless data interoperability between backend services.
- Designed a RAG-based infrastructure incorporating document chunking, vector embeddings, and intelligent context retrieval for enhanced information extraction.

Open Source Contributor — Apicurio-Registry (CNCf Sandbox)

Recent — [Link](#)

- Implemented Quarkus-based HTTP compression for RESTful endpoints, significantly decreasing payload sizes and optimizing network overhead.
- Restored native Kiota compression within TypeScript and Go SDKs, effectively deprecating brittle legacy custom implementations.
- Validated full gzip compatibility through rigorous CI builds, integration testing, and comprehensive API verification protocols.

Open Source Contributor — Braidpool

Dec 2025 – May 2026

- Resolved critical UI responsiveness issues and configuration logic errors for a decentralized mining pool through targeted pull requests.
- Engaged in collaborative peer reviews and technical design syncs, adhering to high standards for version control and development workflow.

ACADEMIC & PERSONAL PROJECTS

CookWise AI — Python, Scikit-learn, Pandas, KNN

[Link](#)

An intelligent recipe recommendation system that suggests personalized meals based on user inputs, dietary constraints, and available ingredients using ML algorithms.

- Trained a KNN-based model to recommend recipes aligned with goals like high-protein, low-carb, or low-sugar diets.
- Deployed as a live web app at cookwiseai.onrender.com, demonstrating end-to-end ML pipeline integration.

CounselConnect — Next.js, Supabase, Tailwind CSS, RAG, SQL

[Link](#)

Architected an intelligent mentorship portal utilizing a custom multi-factor matching algorithm to pair students with specialized peer and professional advisors.

- Deploys a RAG-based AI assistant with semantic knowledge of faculty expertise and historical resolution patterns to deliver instantaneous technical guidance.
- Developed a secure issue-resolution framework supporting anonymous threads and automated high-priority escalation protocols for sensitive student concerns.

Bitcoin Transaction Builder & Address Generator — Rust, Bitcoin Protocol

[Link](#)

Low-level Bitcoin development projects (advanced to Week 3 assignment), demonstrating understanding of cryptographic primitives.

- Implemented raw Bitcoin transaction construction and ECDSA-based address generation from scratch in Rust.
- Applied concepts of UTXOs, script signing, and hash functions to build protocol-level Bitcoin tools.

ACHIEVEMENTS & COMPETITIVE PROGRAMMING

- Selected among top 50 candidates across globe to receive the Summer of Bitcoin 2026 internship to architect an automated AI transcription, CoS2W-optimized STT, and translation pipeline for the Genesis.kb project.
- Competitive Programmer – Pupil on Codeforces; 3* on CodeChef, solved 450+ DSA problems across platforms.
- JEE Advanced 2024 (CRL Rank: 19,785; OBC Rank: 4,966) & JEE Mains 2024 (98.5 percentile) – Qualified (Allen Nagpur).
- MHTCET 2024 – 99.8%tile ; Ranked 537 in Maharashtra state engineering exam among 6.7+ lakh students.
- XII (PCM) – 86.67% — Damodar Patil Science School, Digras (2024) & 10th - 97 %.
- Winner – RoboRush 2025, First-Person-View Maze Solver Robotics Competition, IIITDM Jabalpur, AIR-1 @IARC IIT Kanpur.

POSITIONS OF RESPONSIBILITY

Core Committee Member — Electronics & Robotics Club

Feb 2025 – Present

- Orchestrate specialized technical workshops and intensive hands-on robotics sessions to facilitate student skill acquisition.
- Spearheaded the winning robotics team for the RoboRush 2025 maze-solving competition through optimized hardware-software integration.

Programming & CP Mentor — Programming Club, IIITDMJ

- Providing technical mentorship for juniors in algorithmic problem-solving, advanced data structures, and strategic career roadmapping.
